The screenshot shows a VBA code editor window titled "Classeur2.xlsm - Feuil1 (Code)". The window has a standard Windows interface with minimize, maximize, and close buttons in the top right corner. Below the title bar, there are two tabs: "(Général)" and "SupprimerDoublons". The main area of the window contains the following VBA code:

```
Sub SupprimerDoublons()  
Dim vCellule As Object  
Selection.Sort Key1:=ActiveCell, Order1:=xlAscending,  
Header:=xlGuess, MatchCase:=False,  
Orientation:=xlTopToBottom  
For Each vCellule In Selection  
    If Cellule.Value = vCellule.Offset(1, 0) Then  
        vCellule.Delete  
    End If  
Next  
  
End Sub
```

The code is written in a standard VBA syntax with blue text for keywords and red text for string literals. The window also features a vertical scrollbar on the right and a horizontal scrollbar at the bottom.
